Municipal511

Transnomis Municipal511 is changing the way road information is communicated and managed.

Municipal511 is adopted by upper, lower and single tier municipalities.

Public works are now able to identify project conflicts before they happen. Emergency responders benefit from a real time map of obstructions on their routes. The public (and industry) receive authoritative road information in the popular navigation applications they use.

Municipal511 is a comprehensive map-based road information management and communications web application. Communications channels include a common public map (www.Municipal511.ca), data feeds to leading navigation applications, and emails with mapped locations. The web app supports mobile and desktop environments, without having to install software.

Municipal511 can be personalized by integrating with other systems such as AVL, GIS and CCTV's. Most Municipal511 clients have also purchased Transnomis Responder511 for emergency services, to enhance their information sharing and situational awareness.

For more information, visit www.Transnomis.com/products/Municipal511, or email info@transnomis.com.
