Responder511

Transnomis Responder511 is changing the way situational information is communicated.

Responder511 is a common operating picture like no other. It focuses on mapping road obstructions for emergency responders.

Why is this so important? We do more of what we do every day during major incidents. If we replace email, fax, and voice communicated road information used in every response call, we solve the major communications problem with road information, and by extension we solve the major communications problem during major incidents.

Responder511 is a regional, all-stakeholder, common operating picture. It features aggregated map layers for road obstructions, emergency access points, persistent hazards, resource locations, permitted burning, and other situational information. Push notification includes a map of the location, and links to the common operating picture.

Agencies can personalize the service by adding custom private map layers. Most clients acquire their road information from Municipal511, with the support of their public works departments.
